

Meteor trails

LOFAR can see reflections of distant TV transmitters on meteor trails. Up to now this has been done with LBA at 200MHz in subbands

- subband 247 (48.242188MHz)
- subband 282 (55.07812MHz)
- subband 283 (55.273438MHz)
- subband 319 (62.304688MHz)

extended list

For the weekend 10-13 Aug we tried 9 subbands

241,247,254,275,282,283,303,318,319,395,423,436

which has a mix of distant and close [TV stations](#)
